**ADVANCED URL/APP
DATABASE**

The ShareTech NU Series provides simplified security in one box which reduces the risk of cyber threats, enables early detection, and achieves satisfactory recovery. Moreover, ShareTech cloud-based management allows business leaders to focus on business growth and profit maximization.

NEXT-GEN UTM FEATURES

Anti-Virus

Clam AV, a built-in a cross-platform anti-virus engine, can detect over millions of viruses, worms, and Trojans. Once suspicious emails are detected, the administrator can decide to delete or block them. Moreover, websites will be scanned once the function of anti-virus is enabled in policy. The NU Series contains 1-year Kaspersky license. Customers may renew the accurate and reliable Kaspersky anti-virus engine for their security needs.

Anti-Spam and Shared Signatures

The NU Series employs multi-spam filters: ST-IP Network Rating, Bayesian Filtering, spam characteristics filtering, fingerprinting, auto learning, and personal B/W list. It also gives administrators the flexibility to enforce custom filtering. These help industries create their database by importing the latest spam update. Following actions like forward, delete, quarantine can be taken on the mail identified as the spam. Moreover, the shared signatures mechanism shares a signature of an early receiver with the rest of the group so that higher spam detection accuracy can be obtained.

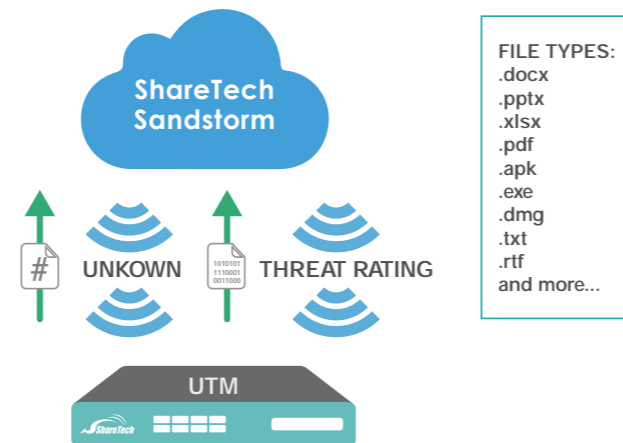

Intrusion Prevention System (IPS)

Built-in IPS inspects the packets from OSI layer 4-7 (transport to application layer) and blocks concealed malicious code and worms delivered in TCP/IP protocols. As soon as an attack is suspected, IT administrators will be notified immediately and later an extensive range of reports will be available for analysis. ShareTech regularly updates the predefined attack-signature database and makes it available as IPS security package.

ShareTech Sandstorm Malicious Programs Filtering System

To detect unknown attached files, such as file in Word, Excel, PowerPoint, PDF, ZIP or RAR format, ShareTech Sandstorm system will compare the suspicious files with our database. Threatening emails will be quarantined and will not have the opportunity to affect the operation of the email system.

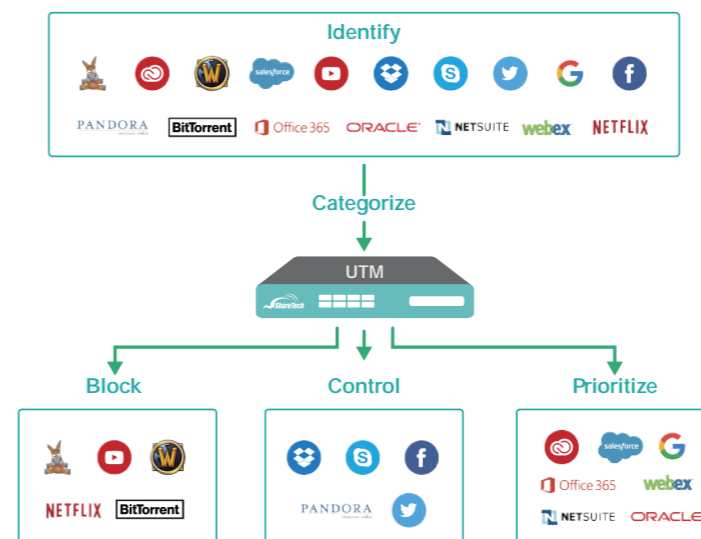

Co-Defense

The NU Series can integrate switches into Co-Defense. The mechanism directly shuts down switch port of infected devices which will slow down internet traffics and helps administrators identify real-time problems, save recourses, and suspend malicious software spreading in the intranet via devices used at work and for other. By using TCP/IP packets capture, infected devices are efficiently located and their paths will be blocked until they return to normal.

Advanced Application Control and Database

To prevent data leakage and ensure regulatory compliance, access to unrelated applications during working hours should be controlled. The advanced application database contains 1000+ modernized applications like P2P, VOIP, GoToMyPC, Webpages, Games, Media Player, Bit Torrent, Foxy (Gnutella), stock market, Instant Messaging, Xunlei, Gator, Yahoo Manager, Virus and Malware, filename extension, Kazaa, Facebook, Zalo, etc. The NU Series contains 1-year application license. Customers may renew the license for an instantly updated database.

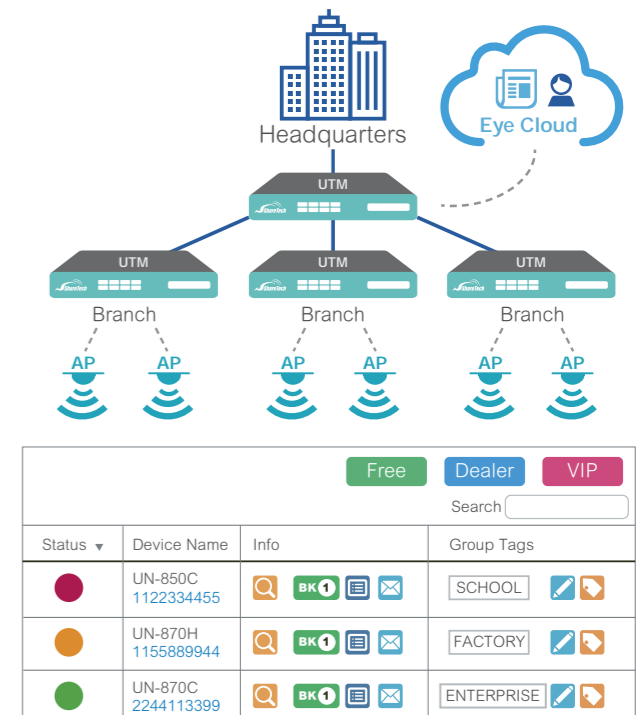

Advanced URL Control and Database

Advanced URL database collects millions of URLs and updates every period. All these URLs and their contents were analyzed and classified, including Pornography & Violence, Network & Cloud Service, Organizations & Education, Security Risks & Criminal, Life Information, and Others. IT administrators can block any category in the database with ease without entering keywords or desired URL addresses one by one. The NU Series contains 1-year URL license. Customers may renew the license for an instantly updated database.

Central Management (CMS, Eye Cloud, and AP management)

CMS designed for multi-site network security appliances deployments allows administrators to remotely restart, reboot, and monitor devices. Moreover, Eye Cloud, a cloud service platform, provides users friendly interface to support instant equipment maintenance and management. It is an all-inclusive solution to monitor various networking appliances deployed in either external or internal networks. When an anomaly occurs, administrators will be notified of the problem.

Log Analysis and CEF format

Most organizations and businesses are required to do data logging and log analysis as part of their security and compliance regulations. The NU Series provides log analysis that helps in reducing problem diagnosis, resolution time and ineffective management of applications and infrastructure. Common Event Format (CEF) format is supported and administrators can view the logging using a log management solution like Graylog.
