ShareTech

HARDWARE-BASED MAIL SERVER

AI Smart Protection
Zero-Day Threat Defense

Email Firewall
Multi-Layer Email Security

Flexible Email Auditing
Sensitive Data Control

Backup & Redundancy
Email Backup & System Recovery

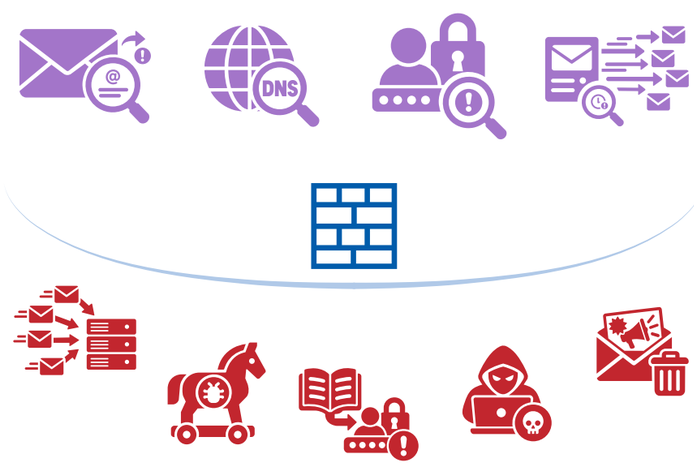
Webmail Mobile Office
Cross-Platform Email & Tools

Mail Server Features

» 1. Email Security

Email Firewall

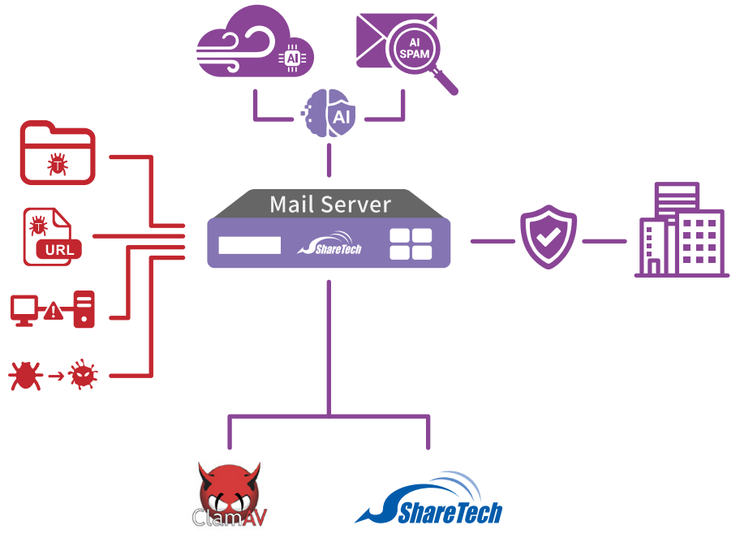
Detects abnormal sending behavior, DNS threats, authentication anomalies, and SMTP SASL activities. It effectively blocks spam, malware, dictionary attacks, and other email-based threats to ensure secure mail operations.



Dual Antivirus & Dual AI Protection (Subscription)

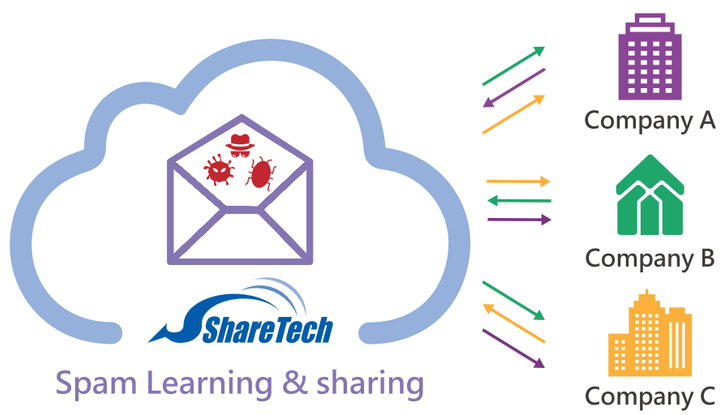
Built-in ClamAV provides automatic virus signature updates, with optional ShareTech antivirus for enhanced protection.

AI Spam and AI Sandstorm analyze email content, sending behavior, and attachments to detect malicious emails and zero-day phishing attacks.



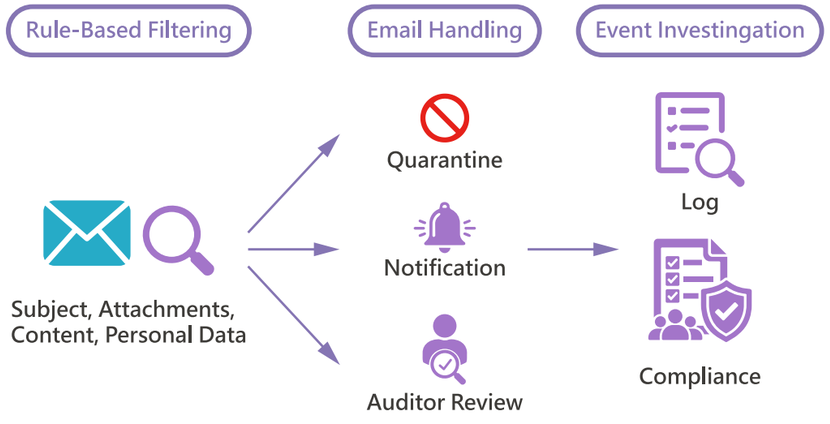
Spam Learning & Sharing

ShareTech's spam sharing & learning mechanism combines with big data analytics and machine learning. It helps users update spam information via shared data from other enterprises to improve detection accuracy.



Email Auditing

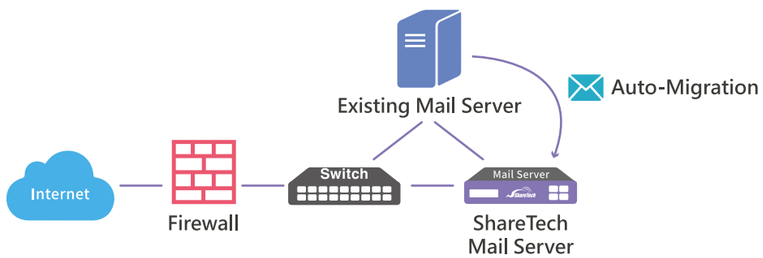
The system filters emails based on sender, subject, content, attachments, personal data, and more. It detects suspicious emails and potential risks, while providing quarantine, notification, auditor review, logging, and other mechanisms to help strengthen internal controls and compliance.



» 2. System Management

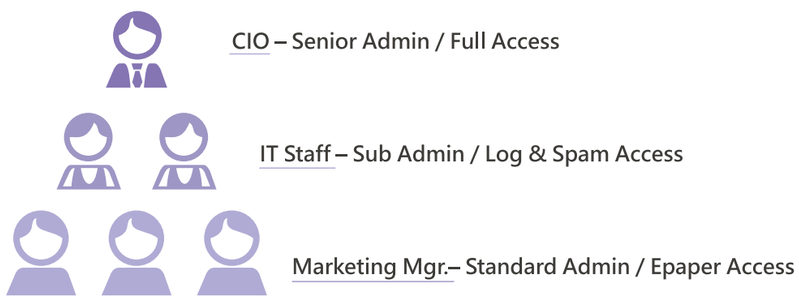
Seamless Email Migration

Supports POP3 and IMAP migration for easy transfer of existing accounts and emails from existing mail servers. It also supports manual account creation and AD/LDAP integration for flexible user management.



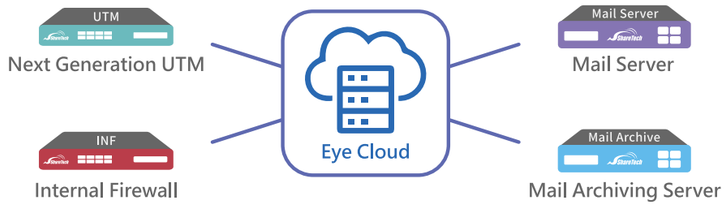
Role-Based Administration

Administrator access can be assigned based on roles and responsibilities, with control over functions such as mail records, user management, system administration, logs, auditing, and more.



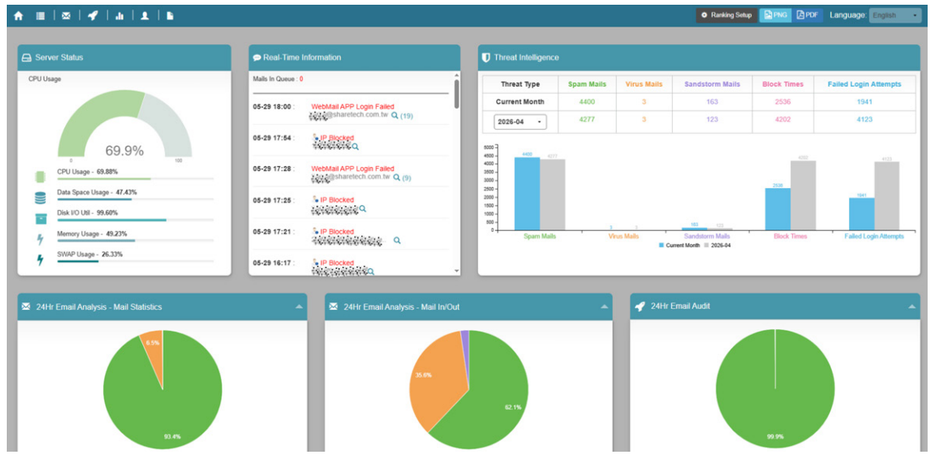
Eye Cloud Management

Eye Cloud provides centralized cloud management for ShareTech devices, including mail servers, mail archiving servers, next generation UTMs, and internal firewalls. Administrators can remotely configure, monitor, manage, and troubleshoot devices from anywhere.



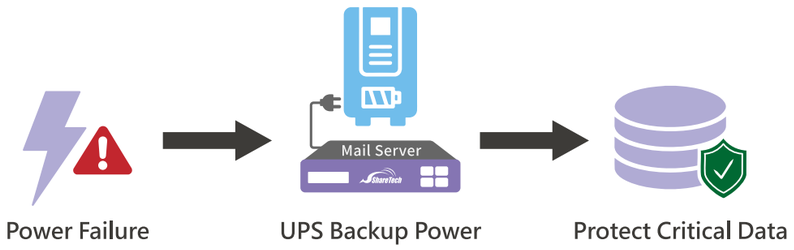
Logs & Threat Intelligence Dashboard (Optional)

Provides detailed logs of Webmail/administrator activities and email traffic for event tracking and investigation. The visual Dashboard presents real-time monitoring, audit statistics, blocking records, and other key information.



Uninterruptible Power Supply (UPS)

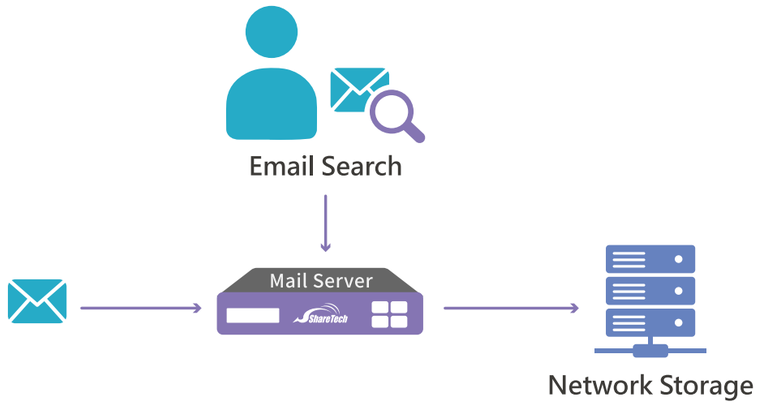
UPS provides temporary power during outages or unstable power conditions. This gives administrators time to save important data and safely shut down the system, helping prevent data loss or system damage.



» 3. Backup & Redundancy

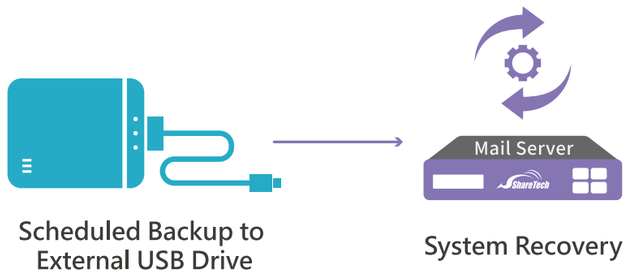
Email Recording

The system records all incoming and outgoing emails, including attachments. Scheduled backups to network storage and flexible search help administrators easily review and track email activities.



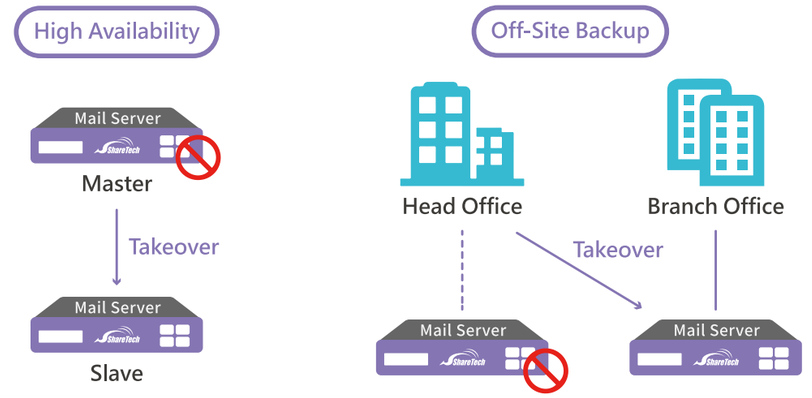
System Backup & Recovery

Supports scheduled system backups to external USB drives for data protection. In the event of a local disk failure, the system can boot from the backup drive and quickly restore the mail server.



High Availability & Off-Site Backup

Active / Standby architecture ensures continuous mail service by automatically switching to the standby server if the primary server fails. Off-site backup also enables automatic failovers between servers deployed at different locations.



ShareTech Information Co., LTD. sales@sharetech.com.tw | www.sharetech.com.tw | help@sharetech.com.tw

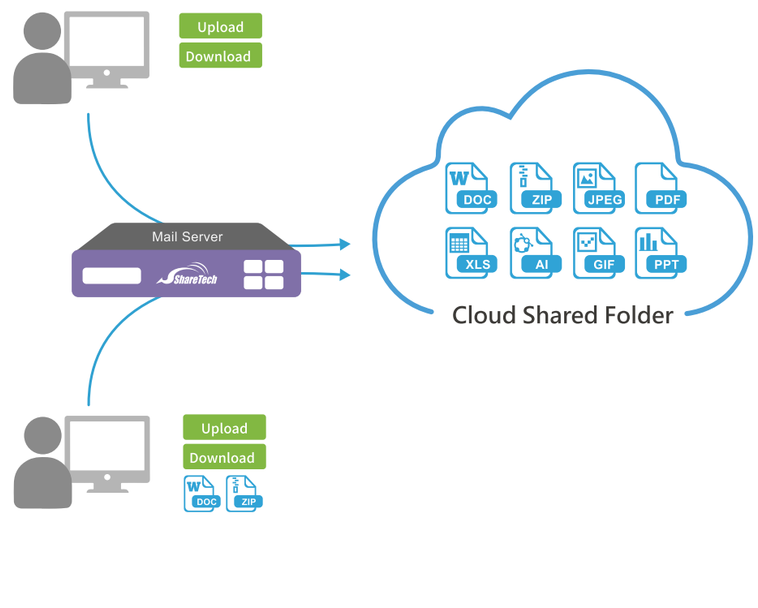
» 4. Webmail & Tools

Personal Webmail

Users can access and compose emails anytime through a web browser. Dedicated iOS and Android apps also integrate email, calendar, and bulletin board functions for convenient mobile access.

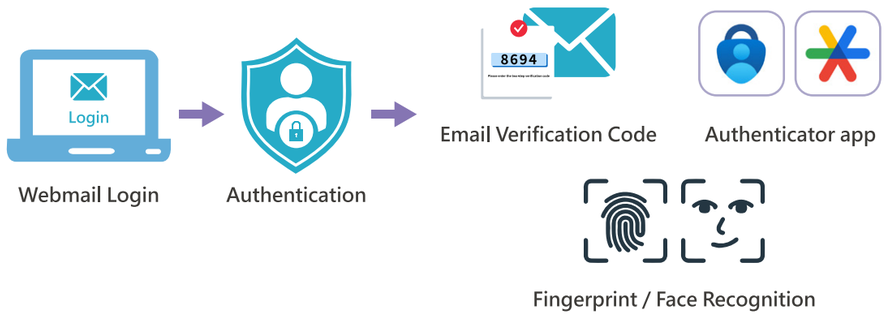
Cloud HDD

Webmail provides shared file storage for easy file uploads and downloads. Oversized email attachments can also be converted into shared download links for convenient file delivery.



Authentication (2FA / Biometrics)

Webmail supports multiple authentication methods, including email verification, Google / Microsoft Authenticator. Fingerprint and facial recognition provide convenient passwordless access and enhanced security.



Outlook Synchronization

ShareTech provides Outlook Connector to synchronize calendars and contacts between Webmail and Outlook. Users can always access the latest information regardless of which interface they use.
